As a beekeeper I have been learning that not only do you need to learn how to manage your beehives and about the honey bees themselves. I have to help them survive by having plants that help them thrive in this time of decline for the bees. I was given a mixture of bee friendly seeds to plant my first year of beekeeping. I also bought some native wildflowers to plant in my yard. I was surprised the second season of what I seen in my garden. My garden came alive with native bees, wasp, and so many interesting insects. I have never seen so many species of bees prior. It was truly a delight to watch for the whole family. We sold our house this fall and we are starting from scratch with a garden. This time around I wanted to learn about plants for the honey bees, native bees, and other pollinators. I want to have plants that are in bloom all season. I also want a healthy garden. I was pretty excited to see, "The bee-friendly Garden" come up for review. I have to say that it was beyond my expectation. I was expecting it just to cover plants. I was delighted that it talked about the many different species of bees in detail. It covers how to identify native bees and what they like, how they nest, and so much more like birds and butterflies. This is a paperback book with 224 pages. Every page has stunning photographs of flowers, gardens, and bees. It was easy to read for the average gardener. It also had a lot of information and I learned a lot.
